AI GOVERNANCE AND AUDIT NOMOS

PROGRAMME

Lectures and Discussion
AI GOVERNANCE AND AUDIT NOMOS
6 November 2026
18:00–19:30
ICI Berlin
In English

Physical AI, smart-city digital twins, and automated administrative systems do not merely observe shared environments: they alter who may move, wait, receive assistance, appeal, or remain visible. Eternal Terra Ear brings together critical spatial theory, artistic research, and civic audit in order to examine these conditions before automated decisions harden into infrastructure.
Topics in sequence: Audit the Geometry and Terrain of Governance for Peacebuilding, Against Synthetic Common Sense: The Computational Afterlives of Democratic Metaphors, and Speculative Nomics and Space.

Workshop and Screening
SOCIAL SYNTHESIS
6 November 2026
19:40–21:00
ICI Berlin
In English

Speculative world-model images introduce four civic scenarios: urban machines and sensing; internet attention and bots; sovereign identity and automated eligibility; and humanitarian infrastructure under displacement or network failure. Participants choose one scenario and use ÉTÉ's shared audit grammar: Situation, Actors, Pressure, Boundary and Evidence.The screening and discussion draw on Mauricio Orozco's crisis-oriented LLM worldbuilding, Fatemeh Kazemi's work on the spatial politics of demilitarized territory, Aphex Redditor's examination of bots and rage-bait infrastructures, Yuliya Gaydamachenko's gradual system diagrams, and Ahmad Baydoun's White Phosphorus research on weaponized environments and spatial evidence.
